

FishTrap

Collector for dead fish and feed residues

RECIRCULATION CONCEPT

With this solution, cleaning the tank from walkways above is no longer required. This greatly improves the farm worker's work situation and safety. The solution also improves fish welfare, since personnel on the walkways stress the fish.

BENEFITS:

- The solution helps reduce the costs of new facilities as there is no need to invest in walkways above the tanks.
- FishTrap removes and collects dead fish and feed residues on the outside of the tank.
- FishTrap can be retrofitted on most tank types.

Operations Manager Arild Nordal

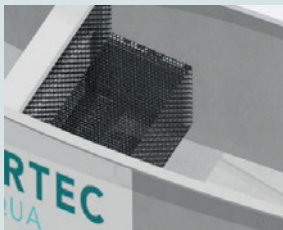

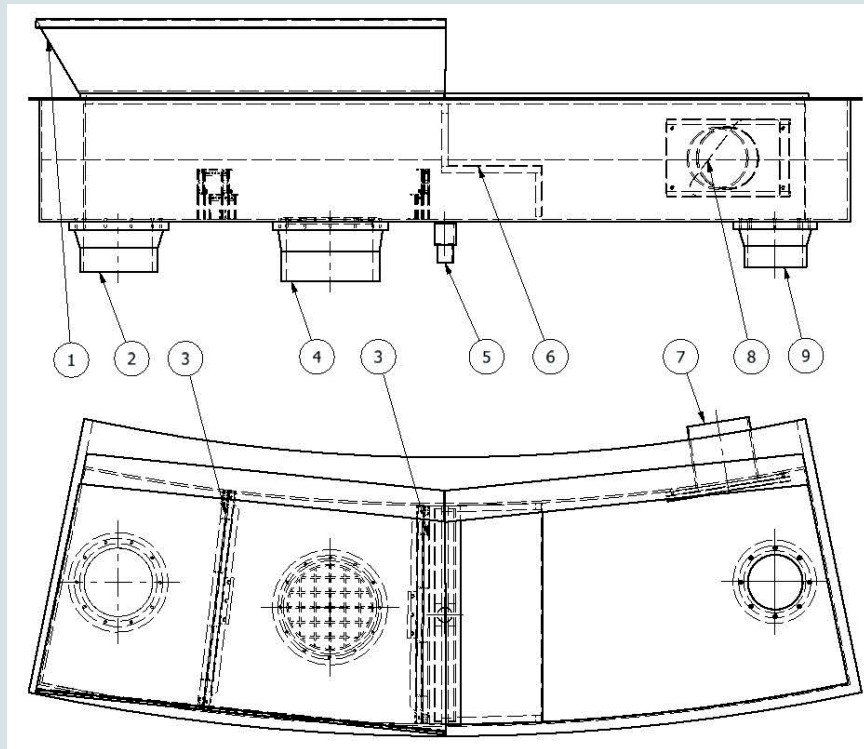

Firda Settefisk

'With FishTrap, we see a significant reduction in stress levels and it has become so much easier to handle dead fish.'

FishTrap

COMPONENTS

1. Transparent cover
2. Water intake
3. Removable, adjustable level
4. Overflow outlet
5. Outlet for water, faeces and feed residues
6. Grate
7. Connection pipe from tank to FishTrap
8. Adjustable opening for water/ fish flow-through from/to the tank and FishTrap
9. Water and dead fish from bottom tank strainer to FishTrap

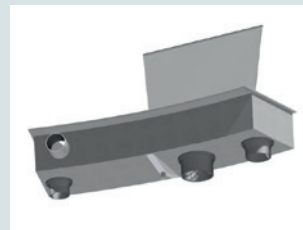

Strainer from which dead fish can easily be removed.

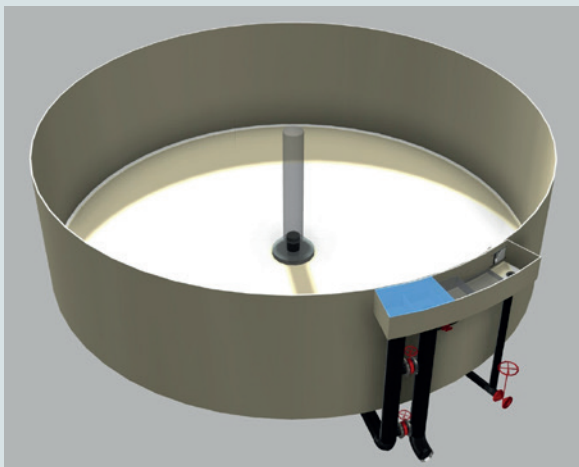

Adjustable opening between tank and FishTrap.

Adjustable water levels in fish trap.

FishTrap viewed from below/behind.

FishTrap installed on a tank with pipe system.
