

Tubs and tanks for fish farming

All sizes of glassfibre tanks

FUNCTIONS AND BENEFITS:

- Supplier of tubs and tanks of glassfibre reinforced polyester (GRP) for fish farming and the fisheries industry.
- Wide selection of traditional tanks, smolt tanks and first feeder tanks.
- Complete installation at fixed prices all over Norway.

Tubs and tanks for fish farming

EQUIPMENT

Tanks: We use suppliers with long experience of producing tubs and tanks in glassfibre reinforced polyester (GRP) for fish farming and the fisheries industry.

Sizes: Up to 4 metre high tanks with diameters between 2 and 16 metres. This corresponds to volumes of between 3,000 and 800,000 litres.

Interior surface: Use of high-quality gelcoat ensures strong and smooth interior finish. Neither the GRP nor the gelcoat produce any harmful emissions, smell or taste. The tanks are approved for storage of drinking water.

Choice of colour: The customer can choose the colour of the tank, but experience suggests that light grey colours are most favourable and most frequently used.

Manhole: The tanks can be delivered with manhole for easy access during maintenance and cleaning.

VarioStreamer/slotted pipe: We recommend use of VarioStreamer™ or a slotted pipe to achieve optimal water hydraulic in the tank.

Dead fish collection system/fish transportation:

Tower strainer: For draining dead fish, feed waste and sludge.

Centre outlets: Our series of centre outlets cover all tank sizes.

FishTrap: Mounted at the rim of the tank to collect dead fish and control the water level.

Tank covers: The tanks are dimensioned for installation of tarpaulin covers for light control etc.

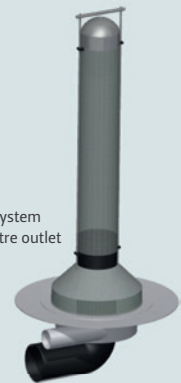

Walkways/railings: Walkways, railings, jump barriers etc. can be adapted and installed above/around the tanks.

Installation: Tanks are installed in accordance with the manufacturer's instructions.
