

FishTrap

Collector for dead fish and feed spill

EASY COLLECTION OF DEAD FISH

With this solution, you no longer need to clean the tank from walkways above. This greatly improves the work situation and safety of farm workers. The solution also improves fish welfare, since personnel on the walkways stress the fish.

BENEFITS:

- FishTrap removes and collects dead fish and feed spill on the outside of the tank.
- FishTrap can be retrofitted on most tank types.

Operations Manager Arild Nordal

Firda Settefisk

"With FishTrap, we see a significant reduction in stress levels and it has become so much easier to handle dead fish."

FishTrap

COMPONENTS

1. Transparent cover
2. Water intake
3. Removable, adjustable level
4. Overflow outlet
5. Outlet for water, faeces and feed spill
6. Grate
7. Connection pipe from tank to FishTrap
8. Adjustable opening for water/fish flow – through from/to the tank and FishTrap
9. Water and dead fish from bottom tank strainer to FishTrap

Strainer from which dead fish can easily be removed.

Adjustable opening between tank and FishTrap.

Adjustable water levels in FishTrap.

FishTrap viewed from below/behind.

FishTrap – The strainer in the middle of FishTrap has a mesh size dimensioned based on the fish size in the tank.

FishTrap installed on a tank with pipe system.

FishTrap inlet has two strainers. The strainer in the middle of FishTrap has a mesh size dimensioned based on the fish size in the tank and can be changed depending on the size of the fish.

FishTrap Broodstock has two strainers. There is a mini tower strainer on the outlet, which is dimensioned for the size of the outlet pipe and the smallest planned fish.
